**B. Amendments to the Claims:**

Please amend the claims as follows:

1. (original) A carton blank for a carton, said carton blank being formed from a sheet material and comprising a plurality of foldably connected panels which form the walls of the corresponding carton, said panels comprising main panels separated by a plurality of longitudinal folds and arranged to form pairs of opposing side walls in said corresponding carton a first pair of main panels each being foldably connected at either end to a respective end panel, said end panels being arranged to form opposing end walls in said corresponding carton, each end wall comprising first and second end panels, and a second pair of main panels each being foldably connected at either end to a transverse edge of a respective end flap, wherein said blank is foldable to provide said corresponding carton in which the transverse edges of the opposing side walls formed by said second pair of main panels are arranged in general correspondence with the longitudinal edges of adjacent respective end panels and the transverse edges of the respective end flaps connected thereto, and wherein at least one of said first end panels is provided with an end tab foldably connected thereto and adapted for fixation to a side wall or to an underside of the corresponding second end panel in said corresponding carton.

2. (original) A carton blank as claimed in claim 1, in which the blank is arranged to form a carton having four side walls.

3. (currently amended) A carton blank as claimed in claim 1 ~~or claim 2~~, in which at least one first end panel provided with an end tab is provided with an end tab foldably connected via a transverse fold to an end of said at least one first end panel opposite the end thereof foldably connected to the respective main panel.

Docket No.: 1421-171 PCT/US  
Page 5

4. (original) A carton blank as claimed in claim 3, in which the end tab is adapted to be folded for fixation to a side wall.

5. (original) A carton blank as claimed in claim 3, the arrangement being such that the end tab is fixable to the underside of the corresponding second end panel foldably attached to the side wall opposite the side wall formed by the main panel to which said end tab is indirectly connected via the intervening respective first end panel.

6. (original) A carton blank as claimed in claim 5, the arrangement being such that the end tab is fixable to the underside of said second end panel so that the transverse fold connecting said first end panel to the respective main panel is substantially aligned with a transverse fold connecting said corresponding second end panel to the respective main panel.

7. (currently amended) A carton blank as claimed in claim 5 ~~of claim 6~~, the arrangement being such that, in the corresponding carton, the end tab is folded through approximately 180° once the second end panel is secured in position.

8. (currently amended) A carton blank as claimed in ~~any previous~~ claim 7, in which the end tab is adapted for fixation by adhesion using a suitable adhesive agent.

9. (currently amended) A carton blank as claimed in ~~any previous~~ claim 8, in which the end tab is sized and shaped to provide optimal interaction between the various end wall components in the corresponding carton.

10. (original) A carton blank as claimed in claim 9, in which the end tab is sized and shaped for fixation to a portion of the underside of the corresponding second end panel that does not contact an adjacent end flap in the assembled carton.

Applicant: Robert Lindsey  
Application No.: Unassigned  
Filing Date: Herewith  
Docket No.: 1421-171 PCT/US  
Page 6

11. (currently amended) A carton blank as claimed in claim 9 ~~or claim 10~~, in which the adjacent end wall components are sized and shaped to contact one another at points not covered by the fixed end tab.

12. (currently amended) A carton blank as claimed in ~~any previous~~ claim 11, in which the sheet material comprises cardboard.

13. (currently amended) A carton blank as claimed in ~~any one of claims~~ claim 1 to 12, in which the sheet material comprises a plastics material.

14. (currently amended) A carton blank as claimed in ~~any previous~~ claim 13, formed from a single piece of sheet material.

15. (currently amended) A carton blank as claimed in ~~any previous~~ claim 14, in which the main panels comprise generally rectangular panels, the longitudinal folds separating the main panels being substantially parallel to one another.

16. (currently amended) A carton blank as claimed in ~~any previous~~ claim 15, in which at least a first main panel is provided with a side tab foldably connected to a longitudinal edge thereof, said tab being adapted for fixation to a further main panel the longitudinal edge of which is adjacent the longitudinal edge of said first main panel in the corresponding assembled carton.

17. (original) A carton blank as claimed in claim 16, in which the side tab is substantially the same length as said first main panel.

18. (currently amended) A carton blank as claimed in claim 16 ~~or claim 17~~, in which the side tab is fixable using an adhesive.

Filing Date: Herewith  
Docket No.: 1421-171 PCT/US  
Page 7

19. (currently amended) A carton blank as claimed in ~~any previous~~ claim 18, in which the first pair of main panels have substantially the same width in the transverse direction from the second pair of main panels.

20. (currently amended) A carton blank as claimed in ~~any previous~~ claim 19, in which the main panels are of substantially equal length in the longitudinal direction.

21. (currently amended) A carton blank as claimed in ~~any previous~~ claim 20, in which the main panels within each of said first and second pairs of main panels are of substantially equal dimensions such that the carton blank may be assembled into a corresponding carton in which opposing walls of substantially the same length and width provide a carton with substantial symmetry.

22. (currently amended) A carton blank as claimed in ~~any previous~~ claim 21, in which the end panels are foldably connected at the transverse end of the respective main panels, and are sized and shaped to form end walls in the corresponding carton which provide, in conjunction with the adjacent side walls, a substantially continuous enclosure of the interior void defined within the corresponding assembled carton.

23. (currently amended) A carton blank as claimed in ~~any previous~~ claim 22, in which the transverse edge of each end flap comprises a transverse fold, wherein the end flap is continuous with the respective main panel and separated therefrom by said transverse fold.

24. (currently amended) A carton blank as claimed in ~~any one of claims~~ claim 1 to 22, in which each end flap is connected to its respective main panel via a connecting portion, which is equidistant from either end of the transverse edge of said respective main panel.

Application No.: Unassigned  
Filing Date: Herewith  
Docket No.: 1421-171 PCT/US  
Page 8

25. (currently amended) A carton blank as claimed in ~~any previous~~ claim 24, in which the end flaps and/or end panels are provided with one or more cutaway portions that permit contact between end wall components positioned on either side thereof in the assembled carton.

26. (currently amended) A carton blank as claimed in ~~any previous~~ claim 25, in which corresponding end panels and end flaps are adapted to be fixed together in the corresponding carton to provide secure opposing end walls.

27. (original) A carton blank as claimed in claim 26, in which said end panels and end flaps are mutually fixable using an appropriate adhesive.

28. (currently amended) A carton blank as claimed in ~~any previous~~ claim 27, in which the blank is foldable into a carton in which the opposing side walls formed by the second pair of main panels are curved.

29. (original) A carton blank as claimed in claim 28, in which the opposing side walls formed by said second pair of main panels are curved outwards, i.e., in a convex manner, in the assembled carton.

30. (original) A carton blank as claimed in claim 29, in which the transverse edge of each end flap foldably connected to the respective main panels is curved and the end panels have corresponding curved opposing longitudinal edges.

31. (original) A carton blank as claimed in claim 30, in which the blank is arranged such that, in the assembled carton, transverse edges of the opposing side walls formed by the second pair of main panels are arranged in general correspondence with the curved longitudinal edges of adjacent respective end panels and the curved transverse edges of the respective end flaps,

Application No.: Unassigned  
Filing Date: Herewith  
Docket No.: 1421-171 PCT/US  
Page 9

whereby said opposing side walls formed by the second pair of main panels have a curved profile in the transverse direction.

32. (currently amended) A carton blank as claimed in any one of the claims ~~29 to 31~~, in which the curved transverse edge of each end flap is foldably connected to the respective main panel via a connecting portion that is approximately equidistant from either end of said curved edge.

33. (original) A carton blank as claimed in claim 32, in which said connecting portion foldably connects said end flap to said respective main panel at a point approximately equidistant from either end of the transverse edge of said respective main panel.

34. (currently amended) A carton blank as claimed in ~~any previous~~ claim 33, wherein a pre-cut band defined by cuts or perforations is provided in the sheet material to define a tearable band or strip in the corresponding carton.

35. (original) A carton blank as claimed in claim 34, wherein the pre-cut band spans the carton blank in the transverse direction.

36. (currently amended) A carton blank as claimed in claim ~~34 or claim 35~~, wherein a grip tab is provided to facilitate a user in pulling the tearable band.

37. (currently amended) A carton blank as claimed in ~~any one of claims~~ claim 34 to 36, wherein the blank is formed from a fibrous sheet material and the pre-cut band runs in generally the direction of the constituent fibres to permit a clean tear along the pre-cut edges of the tearable band.

Page 10

38. (cancelled)

39. (cancelled)

40. (currently amended) A method of forming a carton from a corresponding carton blank as claimed in ~~any one of claims~~claim 1 to 38, the method comprising the step of fixing the end tab foldably connected to at least one of the first end panels to a side wall or to the underside of the corresponding second end panel.

41. (original) A method as claimed in claim 40, wherein the end tab is fixed to the side wall or corresponding second end panel using a suitable adhesive.

42. (original) A method as claimed in claim 41, wherein the adhesive is pre-applied to the surface of the end tab to be fixed to a side wall or corresponding second end panel in the formation of the carton.

43. (currently amended) A method as claimed in ~~any one of claims~~claim 40 to 42, wherein the method comprises the following sequential steps:

- a) folding the main panels along their respective longitudinal folds to form the side walls of the carton; and
- b) forming the end walls.

44. (original) A method as claimed in claim 43, wherein the side walls held in the desired arrangement prior to the step of forming the end walls.

45. (original) A method as claimed in claim 44, in which the side walls held in the desired arrangement by means of a side tab foldably connected to a longitudinal edge of a first main panel.

46. (original) A method as claimed in claim 45, wherein the method includes the step of fixing a first main panel to a further main panel brought adjacent thereto in the folded arrangement by fixing a side tab foldably connected to said first main panel to said further main panel.

47. (currently amended) A method as claimed in ~~any one of claims~~claim 43 ~~to 46~~, in which each end wall is formed by folding and fixing the respective end panels and end flaps.

48. (original) A method as claimed in claim 47, in which the process of forming each end wall comprises the following sequential steps:

- a) folding the first end panel having the end tab connected thereto and holding the first end panel in position by fixing the end tab to a side wall or to the underside of the corresponding second end panel, the end tab having itself been folded into the appropriate configuration;
- b) folding the opposing end flaps into position; and
- c) folding the second end panel and securing in position.

49. (original) A method as claimed in claim 48, in which the end flaps are secured in position using an adhesive prior to the step of folding the second end panel.

50. (original) A method as claimed in claim 47, in which the process of forming each end wall comprises the following sequential steps:

- a) folding the first end panel having the end tab connected thereto and holding the first end panel in position by fixing the end tab to a side wall or to the underside of the corresponding second end panel, the end tab having itself been folded into the appropriate configuration;
- b) folding the second end panel and securing it in position;

Applicant: Robert Lindsey  
Application No.: Unassigned  
Filing Date: Herewith  
Docket No.: 1421-171 PCT/US  
Page 12

c) folding the opposing end flaps and securing in position.

51. (currently amended) A method as claimed in ~~any one of claims~~claim 47 to 50, in which the end flaps are ~~fold~~ folded substantially simultaneously.

52. (currently amended) A method as claimed in ~~any one of claims~~claim 43 to 51, in which an item or items to be stored are inserted into an interior void defined by the assembled side walls prior to the step of forming the end walls.

53. (original) A method as claimed in claim 52, in which both end walls are formed substantially simultaneously.

54. (currently amended) A method as claimed in ~~any one of claims~~claim 43 to 51, in which a first end wall is formed and an item or items to be stored is/are inserted into an interior void defined by the assembled side walls and the first end wall prior to the second wall being formed.

55. (currently amended) A method as claimed in ~~any one of claims~~claim 40 to 55, in which the end tab, and/or the side tab, and or the end panels and/or the end flaps are secured in position by means of an adhesive.

56. (currently amended) A method as claimed in claim 55, in which the adhesive is pre-applied.

57. (currently amended) A method as claimed in ~~any one of claims~~claim 40 to 56, in which the end tab is secured to a side wall.

Applicant: Robert Lindsey  
Application No.: Unassigned  
Filing Date: Herewith  
Docket No.: 1421-171 PCT/US  
Page 13

58. (currently amended) A method as claimed in ~~any one of claims~~claim 40 to 56, in which the end tab is secured to the underside of the second end panel.

59. (cancelled)
